Today, acceligence announced that Reza Chapman has joined the firm as a Consultant, expanding its capabilities across cybersecurity, artificial intelligence, technology transformation, and enterprise risk. Reza brings more than 30 years of experience advising boards, CIOs, CISOs, and executive leadership teams, helping organizations strengthen resilience, modernize technology, and connect risk management to business outcomes.

Organizations are navigating an increasingly complex relationship between technology innovation, cybersecurity, and enterprise risk. AI is accelerating the pace of transformation while introducing new questions around accountability, governance, and resilience. For executive teams and boards, these developments demand informed decisions that balance the opportunities of emerging technologies with the risks and responsibilities that accompany them.

Reza has built his career helping organizations navigate these challenges. His experience spans cybersecurity strategy, technology modernization, enterprise governance, and large-scale transformation across healthcare, financial services, manufacturing, and other regulated industries. He is known for translating complex technical and regulatory challenges into practical strategies that strengthen resilience and support business performance.

Most recently, Reza served as Associate Partner at Infosys Consulting, advising organizations on cybersecurity, generative AI, and enterprise technology strategy. Previously, he held senior leadership roles at Nordic Global, Slalom, Accenture, and EY, where he built and led consulting practices, directed complex transformation programs, and advised major enterprises on cybersecurity governance, technology risk, and operational resilience.

“Reza brings the combination of technical depth, business judgment, and executive perspective that organizations need as cybersecurity and AI become increasingly interconnected,” said Justin Greis, Founder and Chief Executive Officer of acceligence. “He understands that the real measure of a cybersecurity strategy is how well it enables the business to operate, innovate, and respond when conditions change. Having led major consulting practices and advised organizations through significant technology and risk challenges, Reza brings a practical perspective that will be enormously valuable to our clients.”

Reza's addition strengthens acceligence's ability to support organizations at the intersection of AI adoption, cybersecurity risk, regulatory expectations, and technology modernization. As emerging technologies reshape enterprise operations, leaders must consider how governance, accountability, security, and operational resilience evolve alongside innovation. Reza brings the experience to help translate those considerations into practical strategies and confident decisions.

"Resilience is tested when leaders must make consequential decisions before they have all the information they would like," said Reza Chapman. "AI is accelerating that challenge, creating opportunities for innovation while raising expectations for governance, security, and accountability. What drew me to acceligence is its focus on connecting technology and cybersecurity decisions to the business outcomes leaders are ultimately responsible for. I'm excited to work alongside a team that shares that perspective and help clients move forward with greater clarity and confidence."

Reza is also the founder of Standing Watch Advisory and serves on the Management Information Systems Advisory Board at the University of Arizona's Eller College of Management. He holds CISSP and CISM certifications.

Throughout his career, Reza has emphasized the importance of connecting technology decisions to enterprise priorities. His perspective reinforces acceligence's commitment to helping organizations approach complexity with greater clarity, strengthen resilience, and accelerate meaningful transformation.
