

AI and security risks: a cyber leadership panel

Event

Event Posted: April 23, 2026
Event Start: February 11, 2026 1:00 PM
Event End: February 11, 2026 2:00 PM
Time Zone: US/Central Time (GMT-06:00)
Event Type: Webinars
Event Topics: ai, cybersecurity, risk

Artificial Intelligence is moving fast inside every organization. Faster than governance, security, or even budgets can keep up with. Leaders are dealing with real, day-to-day challenges: figuring out who owns what, managing shadow AI, keeping costs under control, and securing systems that change constantly. And with attackers already poking at AI environments, the pressure is only increasing.

This is a chance for cybersecurity and AI leaders to step back and talk openly about what's actually happening. What's working? What isn't? What are people trying as their teams scramble to keep pace?

We'll dig into...

- Where AI risk is really showing up today
- How leaders are setting ownership and expectations
- The true cost of running and securing AI
- How to support innovation without losing control
- Practical steps teams are taking to secure AI systems and data

Host

- Nick Selby, Managing Partner, EPSD, Inc.

Speakers

- Christie Terrill, Chief Information Security Officer, Bishop Fox
- Justin Greis, Chief Executive Officer & Board Member, acceligence
- Andy Chou, Founder & CEO, Ventrilo
- Kris Kimmerle, VP AI and Risk & Governance, RealPage
